SHADE is a scientific blend of inert dyes which when introduced into water alters the color of the water, producing the ultimate in aesthetic value. **SHADE** is safe and is harmless to humans and animals when used in accordance with recommended dilutions. Shading of water is a proven method of effectively producing the desired results in industrial ponds, fish ponds, golf course ponds, irrigation canals, decorative pools, etc.

DIRECTIONS

SHADE should be applied at the rate of one gallon per 10,000 gallons of water. For smaller applications, use 1 milliliter of **SHADE** per gallon of water. Due to the introduction of new water to your system, **SHADE** should be reapplied as needed to maintain color. **NOTE:** For dye stains, common chlorine bleach will reduce or remove most stains.
